Globberry

Policy Management Suite

Smarter policy control. Faster service launches.

Carrier-grade policy control, subscriber data management, and Diameter routing in one flexible, cloud-ready environment for 4G, 5G NSA, and 5G SA.

Integrated Policy Control for Modern Telecom Networks

Globberry combines deterministic real-time policy execution with flexible subscriber data and signaling control. AI assistance simplifies configuration, analysis, impact assessment, and troubleshooting while operator validation and approval workflows remain in control.

Components

PCRF / PCF

Policy and Charging Control

Real-time policy, QoS, charging, and traffic control with deterministic execution and AI-assisted operations.

SPR

Subscriber Profile Repository

High-performance subscriber data management with real-time updates for personalized policy decisions.

DRA

Diameter Routing Agent

Scalable Diameter routing, mediation, enrichment, and subscriber-based signaling control.

Benefits

01 **Faster Policy Administration**

Create and modify complex rules with AI assistance for configuration, explanations, validation, and dependency analysis.

02 **Faster Time to Market**

Launch tariffs, FUP policies, QoS models, roaming services, sponsored data, and personalized offers faster.

03 **Cloud-Ready and Resilient**

Microservices support horizontal scaling, geo-redundancy, monitoring, and high availability.

04 **Lower Platform Costs**

Open-source foundations reduce dependence on proprietary software and additional third-party licensing.

05 **Better Policy Visibility**

Analyze policy usage, subscriber behavior, traffic patterns, and configuration changes more easily.

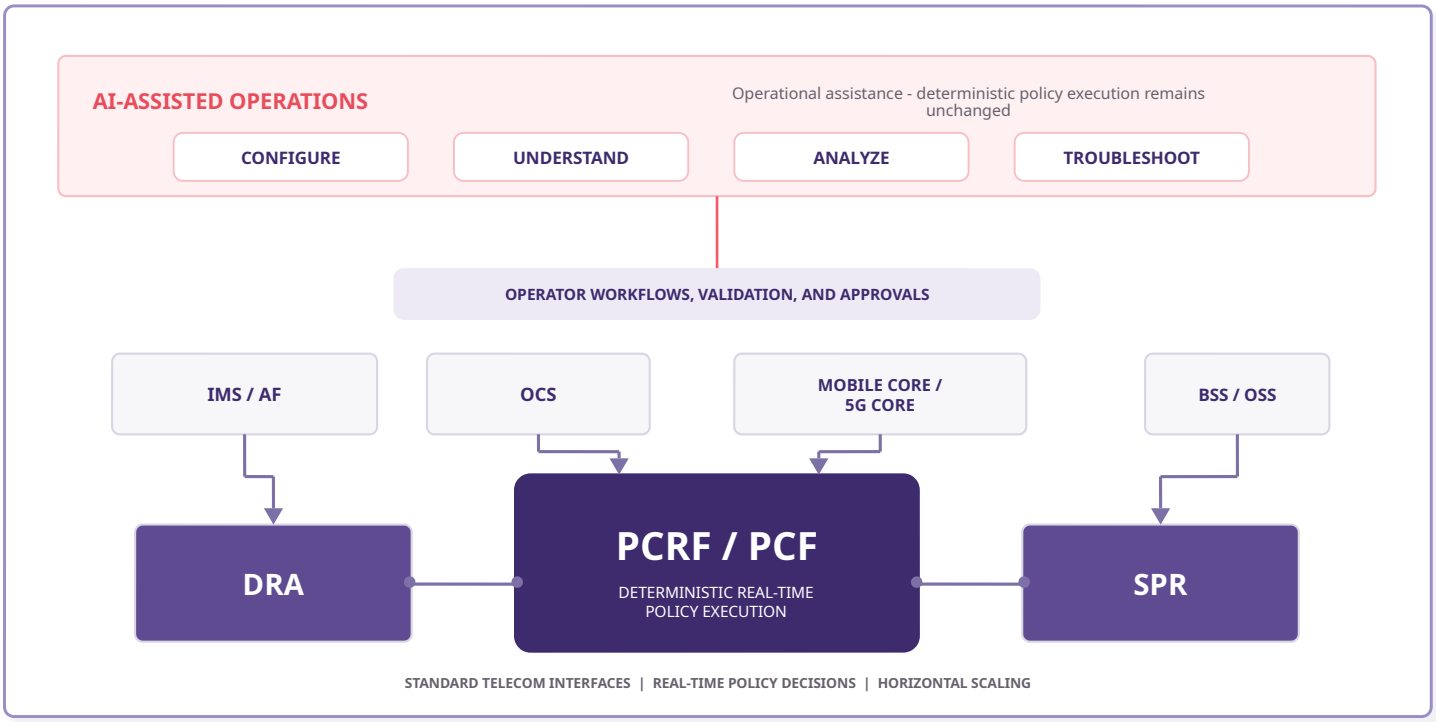

06 **Open Integration**

Standard telecom interfaces connect mobile core, charging, BSS, IMS, TDF, OCS, and subscriber systems.

Launch New Products Faster. Manage Policy Complexity More Easily.

Centralize subscriber policies, QoS, charging, traffic management, and service behavior across 4G, 5G NSA, and 5G SA. Support bill-shock prevention, FUP, sponsored data, bandwidth shaping, MVNO and enterprise policies, VoLTE/VoWiFi, roaming control, and application-specific treatment.

Architecture and AI-Assisted Policy Operations

Advanced Policy Capabilities

VoLTE/VoWiFi
Rx QoS, bearers and access-network info for IMS voice.

ULR via Rx
Location reporting for regulatory and emergency scenarios.

TDF / ADC
Sd-based app detection and granular policy control.

OCS / Sy
Spending limits and dynamic charging-based updates.

FUP
Post-bundle shaping after included traffic volumes.

Trace
Subscriber signaling trace and pcap capture for troubleshooting.

Supplementary Services

01 Consulting

Assess architecture, requirements, integrations, migration needs and define the right deployment approach.

02 Implementation

Full-cycle design, configuration, integration, data migration, testing and user acceptance.

03 Support

Ongoing operations and maintenance, 24/7 shift support, second-level assistance and product expertise.

About Globberry

Globberry is a telecom software and integration company delivering solutions for policy management, network inventory, cloud infrastructure, OSS/BSS integration, and network operations. We work with operators and technology partners across Europe, North America, and other markets.

Smarter policy control for faster service innovation.
